

JavaScript Scroller

iScroll alternative

Beispiel: ohne großes Framework

Bei meiner Suche nach einer Scroll Komponente bin ich auf alle möglichen Probleme gestoßen. In einigen führte die Anzeige von ImageMaps zu Problemen, sie brauchten zusätzlich noch jQuery und die Länge des Codes war eigentlich auch nicht passabel.

Also zur Sache, die hier gezeigte Komponente unterstützt alle aktuellen Browser. Eine Liste der unterstützten Touch Devices werde ich noch aufführen. Es wird sowohl Touch, Mouse als auch Mousewheel unterstützt. Beim verlassen des Scroll-Objektes endet das Scrollen, bei anderen Komponenten war das nicht so, das hatte mich auch gestört. Es werden keine Wrapper-DIVs benötigt, es muss nur ein Script-Datei eingebunden werden die gerade mal 262 Zeilen lang ist,... den Gummiband-Effekt des Scroll-Balkens der dann entsteht wenn man über das Ende hinaus scrollt könnte man noch realisieren.
